Batching Plant Controller

Compact Batching Plant Controller highlights

Industrial PLC designed for the needs of concrete and asphalt batching plants. Integrated I/O on board, digital and analog processing, 20ms batching cycle. Ethernet connection to the PC and remote I/O, fast connection to scale modules.

On board :

Up to 5 LDU scales can be connected, certified to 5.000 divisions OIML III. Full digital calibration of scales and analog signals.

**24 digital outputs
12 digital inputs
1 high speed pulse input
4 analog inputs 20 bit
2 fast serial ports**

Extension :

**5 more scales can be connected, 24 more analog inputs, 1 more high speed pulse input, 300 I/O through a Prometheus II rack, I/O extension via Ethernet Modbus TCP
I/O extension through Can-bus**

Accompanied by the powerful production control software e-Batch, for the control of the plant through a standard PC running Windows 7

Zero programming for the Integrator

Standard application software for Concrete or Asphalt Batching Plants, including all variants from manufactured-concrete products, stationary or mobile ready mix batching plants, skip or belt driven with full parametric I/O customization by WT configuration tool .

Regular software updates via www.e-batch.com.

Total Teleservice of the installation, utilizing latest internet technologies.

This unique package allows the integrator to reduce engineering time to a minimum, still maintaining a standard product with superior performance, in a very attractive price.

The system is designed according to the existing regulations and carries the CE mark.

Regular seminar trainings are organized for the implementation of the system into Concrete and Asphalt plants.
